

```

from abc import ABC, abstractmethod
from typing import List

class Bird(ABC): 3 usages
    @abstractmethod 1 usage
    def make_sound(self) -> None:
        pass

class Sparrow(Bird): 1 usage
    def make_sound(self) -> None:
        print("Chirp Chirp")

class Parrot(Bird): 1 usage
    def make_sound(self) -> None:
        print("Tweet Tweet")

class BirdCage: 1 usage
    def make_bird_sounds(self, birds: List[Bird]) -> None: 1 usage
        for bird in birds:
            bird.make_sound()

cage = BirdCage()
cage.make_bird_sounds([Sparrow(), Parrot()])

```

Test Case:

```

Chirp Chirp
Tweet Tweet

Process finished with exit code 0
